\[
P(A \text{ or } B) = P(A) + P(B) – P(A \text{ and } B)
\]

Congressional papers and political papers generally contain both un-mined data and data that can be re-purposed for many political science researchers. A research agenda that crosses disciplines and forms partnerships with other political scientists and institutions has a better chance for outside funding. The opportunity to share limited resources and expand the academic dialogue beyond your specialty cannot be overstated.

If you haven’t considered congressional papers as a resource, then consider the contents of a typical congressional collection. Here is a table relating collection contents to potential data or questions that political scientists should find relevant. Keep in mind that these collections usually span many years giving the researcher a window to examine issues, relationships, and cause and affect phenomena where the constant or control is the collection material itself. What you do can and should influence how librarians and archivists practice. If you begin to think differently about congressional and political papers, then we also will think about them differently.

Other Suggestions
Political papers outside congressional collections should also be considered, though they may be harder to find. State archives will hold gubernatorial papers, legislative files, and some political party records. GOP and Democratic State Party files are rich sources but hard to find. If you start looking for and requesting access, archivists will be motivated to seek and collect state party material. Labor archives should lend themselves to all kinds of measurement and analyses. A good portal is the Labor Archives Roundtable. It not only links you to archives but also to the archivists who are managing these collections.

Other Fields of Study
Your colleagues in the social sciences such as communications, journalism, and library science produce their own literature on politics, political papers, and government documents. Do a subject search in one of their databases and compare your methodologies with theirs. Team up with your Gov Docs or Political Science librarians–there may be a paper there for both of you. Informatics: “The interdisciplinary study of information content, representation, technology and applications, and the methods and strategies by which information is used in organizations, networks, cultures and societies.” (http://www.archimuse.com/) This link gives an overview of the archives informatics literature http://www.archimuse.com/publishing/bearman_pub.html There appears to be only two articles related to government and democracy but if you are interested in information technology, the transparency of government, and the nature of electronic records and web-based information, there is a place for political science informatics along side medicine, nursing, engineering, music, chemistry and business. Check out this link for an analysis of government websites http://www.insidepolitics.org/egovt03us.html

What questions would political scientists ask and how would they report the data?
